### **DETAILED ACTION**

1. Claims 1-20 have been examined.

#### ***Priority***

2. Acknowledgment is made that the instant application is a continuation of Application No. 09/948,473, filed 09/06/2001, now U.S. Patent No. 6,640,305 B2, which is a continuation of Application No. 09/389,268, filed 09/02/1999, now U.S. Patent No. 6,289,455 B1.

#### ***Information Disclosure Statement***

3. The information disclosure statements (IDS) submitted on 08/01/2005, 06/06/2005, 11/08/2004, and 09/27/2004 were filed before the mailing date of the first Office action on the merits. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statements are being considered by the examiner.

#### ***Allowable Subject Matter***

4. Claims 1-20 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Claims 1-10; and 15-18 are drawn to a method for using a removable cryptographic module and a removable cryptographic module to enable a second device to obtain secure access to encrypted compressed digital video content. The closest prior art, Ishibashi et al., U.S. Patent No. 6,728,379 B1, discloses a similar method and module. Although this references teaches an encrypted content decryption key for compressed video data (see column 8, lines 1-50; figure 7;

Art Unit: 2132

encrypted content decryption key  $K_{se}(K_{cd})$ ), it neither shows nor suggests a removable cryptographic module re-encrypting an initial content decryption key to produce a re-encrypted content decryption key datum, where:

- (i) the re-encrypted key datum enables a second device to decrypt compressed digital video content, and
- (ii) the re-encrypting is secured by a public key corresponding to the second device.

This composite limitation incorporated into independent claims 1 and 15 renders claims 1-10; and 15-18, respectively, allowable.

Claims 11-14; and 19 and 20 are drawn to removable cryptographic modules to enable a second device to obtain secure access to encrypted compressed digital video content. The closest prior art, Ishibashi et al., U.S. Patent No. 6,728,379 B1, discloses similar modules. Although this references teaches an encrypted content decryption key for compressed video data (see column 8, lines 1-50; figure 7; encrypted content decryption key  $K_{se}(K_{cd})$ ), it neither illustrates nor motivates:

using a second key to transform a key derivation datum to determine an initial content decryption key; and

re-encrypting an initial content decryption key in a manner secured using a public key corresponding to a second device.

This composite limitation incorporated into independent claims 11 and 19 renders claims 11-14; and 19 and 20, respectively, allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
